

Web-based Safety Management System

Simple and smart WHS solutions for business

Meet obligations, minimise risk, increase efficiency & improve workplace culture

No longer do you need to navigate hard copies of forms, checklists, and registers.

Take the hard work out of implementing your systems and following paper trails and focus on managing the critical risks within your business.

What does an online Safety Management System achieve?

Online safety management systems are one of the most efficient ways of receiving the information you need to create a safe work environment and provides benefits such as:

Work Faster – Improve your productivity and prevent downtime.

Seamless reporting tools – capture your safety management data for ease of reporting.

Better quality data and online access – You can capture, handle, and store

data securely in a manner which is easy to enter and store for retrieval later. Information is available anywhere and anytime you need.

Improves compliance – An online platform will help you to capture exactly what you need to ensure compliance.

Saves time and money – Tasks are completed online which immediately reduces overhead cost as less paperwork must be carried out.

Minimises error and promotes consistency – No matter how experienced and diligent your workers are, the online system reduces human error in reporting as it guides the worker in the system.

Boosts worker morale – Aligning your workers to a high-level unbiased compliance plan that offers a sense of transparency, confidence, trust, and belonging to the business.

Be connected, build relationships and be a team.

How is an online Safety Management System different to a paper-based one?

A web-based safety management system gives you powerful tools to bring your WHS and wider business systems under control to ensure your business is compliant, incidents are prevented, and your workplace is protected – wherever it may be.

WHS can appear complicated, but it doesn't need to be.

Ai Group can assist you to build your online safety management system with your business in mind. The size of your business, cost and location should not be a barrier to managing WHS in the workplace.

What is the platform?

Built on the power of Microsoft 365 and in line with ISO 45001:2018, your online safety management system will be robust, flexible, and customizable to meet your specific needs.

Online systems are a game changer compared to document-based systems.

The cloud-based system is easily accessible and mobile. The online pages and forms in the system are flexible and configurable.

It's a contemporary alternative to subscription where the system has no ongoing subscription fees.

Depending on your requirements the one-off payment will provide you with:

- Provision of the 365 WHS System to your existing Microsoft license and tenancy.
- Dedicated IT and WHS online briefings and advice.
- WHS Policy, Procedures, Tools (Forms, Checklists and Registers) and Training for 12 months.

Our Ai Group team can assist you to embed your existing safety management system into the online platform, or we can work with you and your team to develop your safety management system specific to your business.

How will Ai Group assist you?

A business consultant will work with you to identify your needs, identify the best solution for you and develop a plan to assist with the implementation of your online safety management system.
